

NCI PIN Pad Device Driver

Supports Windows 95/98/NT/2000 and
WOSA/XFS for Windows NT

Supports IBM 4778 PIN Pad
Uniform 778 PIN Pad

Gain the Reliance of a Fully Supported PIN Pad Device Driver

If your bank's software supports only IBM PIN pads, you may not have been able to take advantage of the newest generation of financial devices offered by other vendors.

Now, with the **NCI PIN Pad Device Driver™**, you can enjoy new options in PIN pad usage.

The **NCI PIN Pad Device Driver** supports Windows 95/98/NT/2000 and WOSA/XFS for Windows NT.

It provides for direct replacement of the IBM 4717 and 4777 devices with no application program changes required.

The **NCI PIN Pad Driver** provides a Win32 interface that is compatible – in

any environment – with the IBM 4778 PIN Pad and also supports the Uniform 778 PIN Pad.

The Win32 support automatically detects which device is connected to the serial port.

While enabling you to switch to other financial devices, the **NCI PIN Pad Device Driver** also facilitates a migration from OS/2 to a Windows NT/2000 environment.

To facilitate all of your financial device requirements, NCI's suite of banking devices also includes the **NCI MSR Device Driver** and the **NCI Universal Printer Driver**. All NCI financial devices fully support Windows 2000.

NCI History

Founded in 1983, NCI has served the financial services industry by developing and implementing large-scale connectivity, migration and retail delivery solutions.

Over the past two decades, we've directed our resources to best serve bankers' changing needs with low-cost, high-tech products. In that time, we've advanced from branch value-add, to migration, to branch automation, to business solutions.

Now, with our newest product, **NCI Business Centre™**, we've developed the next generation, enterprise-wide technology to automate all existing delivery channel business functions under a common platform.

NCI Clients
